

KEURIG MACHINE

For those of us who don't drink coffee this is probably the easiest, no fail, machine possible. Plug in the machine. The water container lifts off the side of the machine – fill it up and replace it. Turn on by pushing the Keurig button. The digital display will let you know when its "ready".

To make coffee, lift the lid using the silver handle, place a K cup in the dispenser and close lid. Place a hot cup on the silver shelf and push the button to dispense the coffee.

Clean up is even easier....turn off the machine, empty the water and unplug.
